TATYANA ZALUKAEVA SUPERVISORY PRIMARY EXAMINER						

Continuation of 11. does NOT place the application in condition for allowance because: The applicant's arguments have been considered but are not persuasive.

In response to the applicant's arguments with respect to claims 1, 14, and 20, recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. The annular portion of Lovert is fully capable of being inserted from below the holder member, even if this method of insertion is not disclosed in the prior art.

In response to the applicant's arguments with respect to claim 9, it is noted that the present claim discloses the X-shaped sheet is positioned on top and bonded to the topsheet. The X-shaped sheet is not claimed as being positioned on top of the topsheet; the limitation "on top" is not defined in the claim as in reference to the topsheet.

In response to the applicant's arguments with respect to claims 13, 17, and 22, it is noted that the present claims disclose the absorbent core is "disposed at" and not directly on the top wall. The absorbent core of Ahlstrand is located proximal the top wall, and therefore fulfills the claimed limitation of "disposed at."

In response to the applicant's arguments with respect to claims 19 and 23, it is noted that the discharge containing portion of Lovert, as shown in figure 2, has a height at its end closest to the longitudinal end portions of the article that is smaller than the height of the annular portion. Since the location at which the height of the discharge containing portion is not defined by the present claim, Lovert fulfills the limitations of the claim.
